Is this online content (video, article etc.) accessible?

Yes

Do not assume that materials (such as Youtube videos) are accurately closed captioned because they have a CC icon. To be certain, turn the CC on, turn the volume off, and watch the video to see if you can follow it.

Unsure

Investigate whether or not the video has CC, and if so, is it accurate and do the captions synchronize and match the video? Do not assume that materials (such as Youtube videos) are accurately closed captioned because they have a CC icon. To be certain, turn the CC on, turn the volume off, and watch the video to see if you can follow it.

No

Remove inaccessible materials. Materials are not to be made available to any students until they are made accessible for all students. For example, if a video is not closed captioned, do not post it on Blackboard until it has been captioned.

Consult with Sue Phelps, Health Sciences and Outreach Services Librarian, for assistance in locating accessible materials.

Consider an alternate course material that meets your learning objectives and is accessible.

Faculty may submit a Closed Captioning Request Form to IT (https://studentaffairs.vancouver.wsu.edu/student-affairs/closed-captioning-request), however, ample time is needed to caption the material. Typically IT requires receiving the request two weeks before the video is posted/made available to the class. For especially long videos more time may be required.

For short online videos faculty are always encouraged to close caption videos on their own using a system called Amara. Please watch the following video to learn how Amara works: https://www.amara.org/en/videos/UnuBiu7N6ZB/info/understanding-universal-design-through-captioning/
